## Exercise Sheet 3

## Exercise 1: Deriving the Evidence Lower Bound (25 + 25 P)

In this exercise we want to derive the evidence lower bound mentioned in the lecture.

(a) Therefore you first show:

$$D_{KL}[Q(z|X)||P(z|X)] = \mathbb{E}_{z \sim Q(z|X)} [\log Q(z|X) - \log P(X|z) - \log P(z)] + \log P(X)$$
(1)

where  $D_{KL}$  is the KL divergence.

$$\begin{split} D_{KL}[Q(z|X) \| P(z|X)] &= \int_{z} Q(z|X) \log \frac{Q(z|X)}{P(z|X)} dz \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log \frac{Q(z|X)}{P(z|X)} \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - \log P(z|X) \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - \log \frac{P(X|z)P(z)}{P(X)} \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - (\log P(X|z) + \log P(z) - \log P(X)) \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - \log P(X|z) - \log P(z) + \log P(X) \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - \log P(X|z) - \log P(z) \right] + \log P(X) \end{split}$$

(b) Show:

$$\log P(X) - D_{KL}[Q(z|X)||P(z|X)] = \mathbb{E}_{z \sim Q(z|X)} \left[ \log P(X|z) \right] - D_{KL}[Q(z|X)||P(z)]$$
 (2)

Now you can choose suitable tractable functions P(X|z), Q(z|X) (e.g. as neural networks) and P(z) (e.g. as isotropic gaussian) and one can train the variational autoencoder by maximizing the ELBO.

$$\begin{split} \log P(X) - D_{KL}[Q(z|X) \| P(z|X)] &= \log P(X) - (\mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - \log P(X|z) - \log P(z) \right] + \log P(X)) \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log P(X|z) - (\log Q(z|X) - \log P(z)) \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log P(X|z) \right] - \mathbb{E}_{z \sim Q(z|X)} \left[ \log Q(z|X) - \log P(z) \right] \\ &= \mathbb{E}_{z \sim Q(z|X)} \left[ \log P(X|z) \right] - D_{KL}[Q(z|X) \| P(z)] \end{split}$$

## Exercise 2: Programming (50 P)

Download the programming files on ISIS and follow the instructions. Fill in the gaps in the GPT implementation.
